We have a special interest in the immunological tumor-host interaction with a particular focus on neutrophils and myeloid-derived suppressor cells. A second research theme of the division aims at better understanding the immunoregulatory properties of so-called mesenchymal stromal cells. In the last ten years we have authored or co-authored over 130 peer-reviewed publications, some of which are highly cited.

Over the last ten years we have established and worked on the following three main research themes:

- Immunoregulatory mechanisms in tumor-host interaction
- Immunological and biological tumor therapy
- Immunobiology of mesenchymal stromal cells
